GitHub Project Management

Christophe Prud'homme
2022

GitHub

Project planning

- Create issues(tasks),
- break them into tasks,
- track relationships,
- add/use custom fields,
- and have conversations.

Visualize large projects as spreadsheets or boards, and automate everything with code.

GitHub

Table vs Board Views

T

- Built like a spreadsheet, project tables give a live workspace to filter, sort, and group issues and pull requests.
- We can tailor them to your needs with custom fields and saved views.
- boards can display group issues using custom fields (e.g. Status)

- boards can display group issues using custom fields (e.g. Status)

GitHub

Break issues into actionable tasks

- Tackle complex issues with task lists
- track their status with new progress indicators.
- Convert tasks into their own issues
- navigate your work hierarchy.

- navigate your work hierarchy.

GitHub

Conversations

- Move conversations forward
- Express ideas with GitHub Flavored Markdown,
- mention contributors,
- react with emoji,
- clarify with attachments(videos, pdf, images...),
- see references from commits, pull requests, releases, and deploys.
- Coordinate by assigning contributors and teams,
- or by adding them to milestones and projects.

All in a single timeline.

GitHub

Create views

- Save views for sprints, backlogs, teams, or releases.
- Rank, group, sort, and filter issues to suit the occasion.
- Choose between tables, boards, and timelines.

GitHub

Extend issues with custom fields

- Track metadata like iterations, priority, story points, dates, notes, and links.
- Add custom fields to project tables
- edit from the issue sidebar.

1	pifafu		
2	cookienomster	Bug	Cycle 1
3	mariorod, moe, ar	Need help	Cycle 3
4	lerebear		
5	ajashams	Design	Cycle 4
6	samoshin	Need help, Bug	Cycle 2
7	kirkwayman	Need help	Cycle 1
8	mdo	Need help	
9	keisaacson		
10	berkelmas	Back-end, Bug	Cycle 1
11	vilacides, trosage		Cycle 4
12	mariorod	Bug	

GitHub

Extend issues with custom fields

- Track the health of your current iteration cycle, milestone, or any other custom field you create with new project insights.
- Identify bottlenecks and issues blocking the team from making progress with the burn up charts.

GitHub

Automate workflows

- Automate the project planning with workflows.
- Automatically triage issues, set values for custom fields, react to changes, or schedule something.
- You can even tee them up to run an Action.
